TELGUARD
HOMECONTROL

Telguard Cellular Service

Telguard is a cellular service provider for IMPASSA and PowerSeries DSC panels. DSC products that include Telguard SIMs deliver the functionality and UL certification dealers have come to expect from all DSC products.

The Telguard SIM works in the U.S. on the AT&T network and the same SIM leverages pan-Canadian coverage combining the networks of Rogers, Bell, Telus and SaskTel. Use Telguard SKUs for all installations and leverage volume pricing discounts from the Telguard Advantage Program (TAP).

HomeControl OneRate Plan

This single, all-in price enables dealers to more effectively upsell interactive features, and capture higher RMR in today's highly competitive security market.

HomeControl OneRate includes:
• Remote arming.
• Upload/download via DLS.
• Unlimited sensors.
• Ability to use touch screens when with the ASG1000-1T5NAS HUB.
• Z-Wave automations and schedules with the ASG1000-1T5NAS HUB.
• End user notifications.
• Live & event based video.
• 500MB or 21 days of video storage.

Video with OneRate

With the OneRate plan you can add up to 10 full motion cameras sharing 500MB of video storage per month to any system, for no additional charge.

The C24-CAM54IR or C24-CAMANL, along with the ASG1000-1T5NAS HUB, deliver event-triggered video clips or images, or streaming video to a smartphone or computer.

For installations that do not require the ASG1000-1T5NAS HUB, choose the TGHC Camera, and lower the cost and complexity of an installation.

Interactive
